LK Colour Technology is a scientifically advanced, cost effective, colouring system that delivers intense colour results.

LK Cream Color

LK Cream Color is a low ammonia (1-1.5%), cream based permanent colouring system that delivers dramatic results across the whole colour spectrum.

Available in 83 shades, LK offers professional hair salons superior coverage on white hair, vibrant fashion reds, brilliant blondes with up to five levels of lift with 11 series, strong rich browns and soft pastel tones.

The low ammonia formula ensures longer lasting results, less odour and fewer problems with sensitivity.

Millenium

Millennium is a colouring system of vibrant fashion colours containing micro molecules and protective agents to give hair intense shine. It consists of 12 shades and is available in four reflects of fire, gold, bronze and violet.

Flash

Create intense flashes of red, red-copper, copper and red-violet in 15 minutes under heat (or 35 minutes without heat) on natural or coloured hair without the need for prelightening.

Shining Extra-Lightening

Shining Extra-Lightening creates up to five levels of lift in 15 minutes under heat (30 minutes without heat) using a unique conditioning formulation that contains no ammonia. Shining Highlighting Cream and Shining Highlighting Powder are mixed with a developer to create the Shining Extra Lightening cream. Ideal for most hair types, including natural, tinted and permed hair. Perfect for highlighting and foiling.

Dous Color Tone on Tone

Dous Color Tone on Tone is a no-ammonia, tone on tone demi-colour.

Dous covers 80% of white hair and is available in 38 intermixable shades to suit every client. Ideal for men because it delicately covers whilst maintaining natural shades.

Dous Glamour contains 12 intermixable shades in brilliant, fashionable colours ranging from hot reds to vibrant blondes.

>>> professional colouring systems

Mastey Alternative Colour is an ammonia free colouring system that causes minimal damage to the hair, less colour fade and allows for rich colours.

Teinture - no ammonia gel

Teinture was the world's first ammonia-free, high-lift, permanent hair colouring system. Teinture's HEMEA™ system is a safe, natural penetrating agent that drives the dye molecules deep into the hair shaft without using ammonia. The deep conditioning agents and vitamins in Teinture help to protect the external cuticle (the hair's natural defence against colour fade) for brilliant colour that resists fading for longer.

Instantane

Instantane helps restore colour to faded hair by penetrating the cortex with dye molecules that attach to the amino acid tyrosine, to lock in colour. Hair becomes rich, vibrant and shiny.

Temporelle

Temporelle, a range of 15 semi-permanent colours from Mastey, offers hairdressers a colour service that delivers vibrant fashion colours whilst ensuring optimum hair condition.

Temporelle does not change the hair's structure. There is no colour build up, no regrowth or demarcation lines and no damage to the hair. In fact, Temporelle actually conditions the hair whilst creating high gloss colour and natural shine.
